CropConnect

Local sourcing, done for you.
We make restaurant menus more profitable.

Restaurant supply · Agent-run · Pre-seed

Problem

Walk the logic of an independent restaurant and you land in the same corner every time.

01 Independent kitchens net just **3 to 5%**. Margins are razor thin.

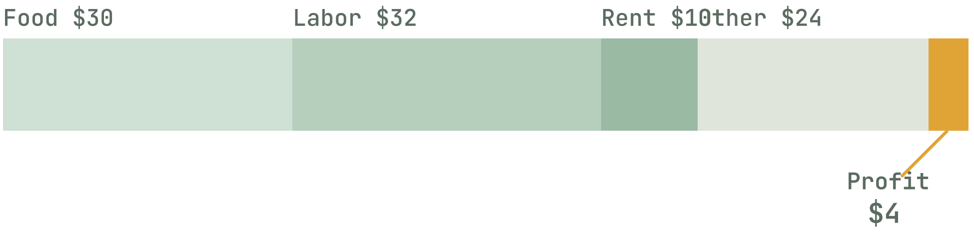
02 Every easy cost is already cut. **There is nothing left to trim.**

03 So the only lever left is to **charge more for the same plate.**

04 Local food earns a premium and pulls diners in. But sourcing it is a **second full-time job** of calls, contracts, and trucks.

→ **The result:** most kitchens never do it and leave the margin on the table.

WHERE EVERY $100 OF REVENUE GOES



The whole business runs on the last $4.

Product

An AI agent runs local sourcing end to end. You name one ingredient. It does the other eight jobs and shows the work on a live board.

✓	✓	✓	4	5
Request	**Farm match**	**Agreement**	**Delivery**	**On the menu**
you ask once	vetted, ranked	signed for you	weekly, on us	earning margin

- **You do two things.** Ask, and serve.
- Set up in ~10 min. First item free.
- Backup farms cover shortfalls.

Opportunity

US foodservice is a $1.1T market on track to roughly double by 2032. Full-service kitchens are our wedge.

- TAM: **$1.1T** US foodservice across **1M+** outlets.
- SAM: **34,000+** full-service restaurants where local moves the check.
- SOM: one dense metro of pilots, then expand city by city.
- We bill the service layer, so revenue recurs and grows per location.

Business model

Food passes through at cost. We earn a recurring monthly service fee that scales with usage. The model on one sheet.

FEE PER ACCOUNT, MONTHLY

LINE ITEM	UNIT	MONTHLY
Base platform	1	$149
Farms managed	2 × $60	$120
Items live	4 × $30	$120
ARPA	–	**$389**
Annual run-rate	×12	$4,668
12-month term	-20%	$311

RECURRING REVENUE BY STAGE

METRIC	PILOT	YEAR 1	YEAR 2
Accounts	10	50	200
ARPA / mo	$389	$389	$420
MRR	**$3.9K**	**$19.5K**	**$84K**
ARR	$47K	$233K	$1.0M
Food markup	$0	$0	$0
Cut of sales	$0	$0	$0

Illustrative. Food funded separately at cost; figures exclude it.

Competition

Big money has chased local food before. The winners and the wrecks teach the same two lessons.

PLAYER	MODEL	REPORTED RAISE	THE LESSON
Sysco · US Foods	Broadline distribution	`Public, $40B+`	Markup hidden in food. No local story.
Misfits Market	DTC produce boxes	`~$525M, ~$2B val`	Owns warehouses and trucks. Capex heavy.
Good Eggs	Local grocery delivery	`~$190M`	Over-expanded geographies. Logistics nearly sank it.
Full Harvest · ProducePay	B2B produce marketplace	`$45M–$350M+`	A marketplace, not a done-for-you service.
CropConnect	Agent-run sourcing service	`Pre-seed`	Asset-light. Regional. We own no trucks.

WHAT WE LEARNED

The two things that broke the highest-valued players were the same:

1. Physical distribution. Owning trucks and warehouses crushed margins.

2. Leaving the region. Expanding markets too early broke the model.

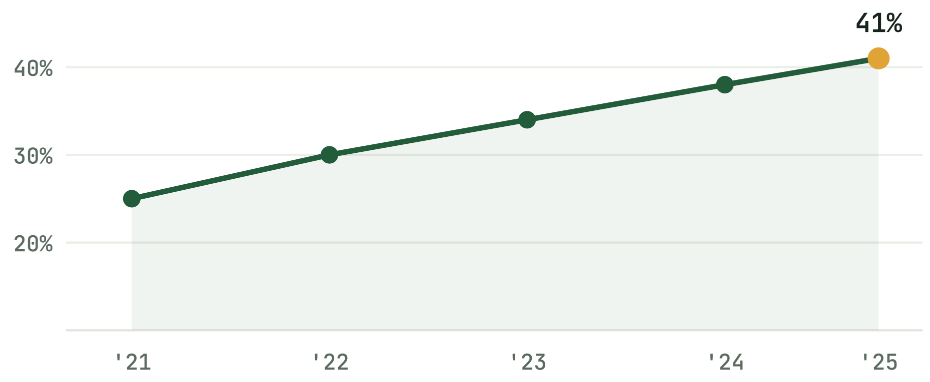
We do neither. An agent orchestrates third-party logistics, and we stay dense in one metro before we add the next.

Why now

Diner demand for local has climbed for years, and AI agents finally make true done-for-you service affordable.

- **44%** of diners are more likely to visit a restaurant that prioritizes local.
- **41%** say local sourcing already drives where they eat.
- **$0.68** of every local dollar stays in the community, versus $0.43 otherwise.
- Agents cut the cost of running this service by an order of magnitude.

SHARE OF US DINERS INFLUENCED BY LOCAL SOURCING



Source: National Restaurant Association; USDA AMS. Trend illustrative.

The ask

Raising a $50K to $100K SAFE to prove the model in one metro. Almost every dollar goes to early validation.

- **$50K–$100K SAFE.** Enough to run real sourcing for the first cohort.
- Goal: **10 to 15** paying restaurants with proven margin lift.
- **95%** of the raise goes straight to validation, not overhead.
- The proof, not the polish, unlocks the pre-seed.

USE OF FUNDS · ~$75K MIDPOINT

WHERE IT GOES	SHARE	AMOUNT
Pilot sourcing & delivery	55%	$41K
Founder runway (hands-on sourcing)	25%	$19K
Part-time ops help	15%	$11K
Early validation	**95%**	**$71K**
Tools, infra, legal	5%	$4K
