Local sourcing, done for you.
We make restaurant menus
more profitable.

Restaurant supply

Agent-run

Pre-seed

PROBLEM

Problem

Independent restaurants run on razor-thin margins, and the easy costs are already cut.

- Full-service restaurants net just **3 to 5%**. Almost nothing is left to cut.
- The one real lever is to charge more for what is on the plate.
- Local food earns a premium, but sourcing it is a second full-time job.
- So most kitchens skip it and leave the margin behind.

WHERE EVERY \$100 OF RESTAURANT REVENUE GOES

Typical full-service P&L. The whole business runs on the last \$4.

SOLUTION

Solution

An AI agent runs local sourcing end to end. The restaurant only says what it wants and puts it on the menu.

- Tell us one ingredient. The agent runs the rest.
- It **finds and vets farms, signs the agreement, delivers weekly**, and hands over the provenance.
- Set up in about **10 minutes**. First item is free.
- The kitchen does two things: ask, and serve.

DIVISION OF LABOR

THE AGENT

8 jobs

THE RESTAURANT

2 jobs

Source · vet · negotiate · contract · deliver · cover shortfalls · provenance · margin tracking

Product

Every ingredient runs through the same automated pipeline. A live board shows the agent's work.

- Automated end to end.
- Backup farms cover shortfalls.
- Provenance ready for the menu.

Opportunity

US foodservice is a \$1.1T market on track to roughly double by 2032. Full-service kitchens are our wedge.

- TAM: **\$1.1T** US foodservice, **1M+** outlets.
- SAM: **34,000+** full-service restaurants where local moves the check.
- SOM: one metro of pilots, then expand city by city.
- We bill the service layer, so revenue recurs and grows per location.

US FOODSERVICE SALES, \$ TRILLIONS

Business model

Food passes through at cost. We earn a recurring monthly service fee that scales with usage and rewards longer terms.

- **No markup** on food. **No cut** of sales.
- Fee = base + per farm + per item. **Recurring** and expands as a kitchen adds dishes.
- Term discounts: **10%** at 6 months, **20%** at 12.
- Illustrative ARPA below: a typical 2-farm, 4-item account.

SERVICE FEE	MONTHLY
Base platform	\$149
Farms managed (2 × \$60)	\$120
Items live (4 × \$30)	\$120
ARPA, monthly	\$389
Annual run-rate / account	\$4,668
On a 12-month term (–20%)	\$311 / mo

— WHY NOW

Why now

Diner demand for local has climbed for years, and AI agents finally make true done-for-you service affordable.

- 44% of diners are more likely to visit a restaurant that prioritizes local.
- 41% say local sourcing already drives where they eat.
- **\$0.68** of every local dollar stays in the community, versus \$0.43 otherwise.
- Agents cut the cost of running this service by an order of magnitude.

SHARE OF US DINERS INFLUENCED BY LOCAL SOURCING

The ask

Raising a \$1.5M pre-seed to onboard the first 100 kitchens in one metro and prove repeatable margin lift.

- Live agent, real per-account product, first paid pilots in market.
- 18-month plan to a repeatable, profitable metro playbook.
- Then expand city by city on the same motion.
