

CropConnect

Local sourcing, done for you.
We make restaurant menus
more profitable.

Restaurant supply

Agent-run

Pre-seed

Keshav Krishnan, Founder

Built CropConnect end to end. His research on the economic cost of climate-driven migration is the conviction behind betting on local, resilient food systems.

Problem

Thin margins, rising expectations, and no time to source. The numbers all point the same way.

- Independent full-service restaurants net just 3 to 5 percent. Margins are razor thin.
- Food and labor already eat about 60 cents of every dollar, so little is left to cut.
- 38 percent of diners are more likely to choose a restaurant that offers locally sourced food.
- Six in ten consumers care where their food comes from, and 55 percent want the story behind it.
- Diners increasingly judge a kitchen by its sourcing, yet doing it by hand is a second full-time job most skip.

WHERE EVERY \$100 OF REVENUE GOES

The whole business runs on the last \$4.

Product

An AI agent runs local sourcing end to end. You name one ingredient. It does the rest.

- What it solves. Going local is a second full-time job, sourcing, vetting, contracts, delivery, so most independent kitchens skip it.
- How it helps. You name one ingredient. The agent sources it, signs the farm, runs weekly delivery, and tracks the margin. Set up in about 10 minutes.
- The demand. 38% of diners choose a restaurant specifically for locally sourced food, and they pay more for it.

Source: National Restaurant Association, 2022 State of the Industry.

THE PIPELINE

- ✓ **Request**
you ask once
- ✓ **Farm match**
vetted and ranked
- ✓ **Agreement**
drafted for you
- 4 **Delivery**
weekly, on us
- 5 **On the menu**
earning margin

Why now

Diner demand for local has climbed for years, and AI agents finally make true done-for-you service affordable.

- 38 percent of diners are more likely to choose a restaurant that offers locally sourced food.
- Demand for ingredient transparency rose from 69 percent in 2018 to 76 percent in 2023.
- 68 cents of every local dollar stays in the community, versus 43 cents otherwise.
- AI agents make true done-for-you service affordable for the first time.

DINERS MORE LIKELY TO CHOOSE A RESTAURANT WITH LOCAL FOOD

Opportunity

US foodservice is a \$1.1T market on track to roughly double by 2032. Full-service kitchens are our wedge.

- TAM: \$1.1T US foodservice across 1M+ outlets.
- SAM: 34,000+ full-service restaurants where local moves the check.
- SOM: the Indianapolis area first, then expand city by city.
- We bill the service layer, so revenue recurs and grows per location.

US FOODSERVICE SALES, \$ TRILLIONS

Business model

Food passes through at cost. We earn a recurring monthly fee that scales with the items and the volume we run, never per farm and never a cut of sales.

FEE PER ACCOUNT, MONTHLY · MID-SIZE KITCHEN

LINE ITEM	UNIT	MONTHLY
Base service	1	\$299
Items live	3 × \$199	\$597
ARPA (3 items)	—	\$896
Annual run-rate	×12	\$10.7K
High-volume account	6 × \$349	\$2.4K

RECURRING REVENUE BY STAGE

METRIC	PILOT	YEAR 1	YEAR 2
Accounts	10	50	200
ARPA / mo	\$896	\$896	\$950
MRR	\$9K	\$45K	\$190K
ARR	\$108K	\$538K	\$2.3M
Food markup	\$0	\$0	\$0
Cut of sales	\$0	\$0	\$0

Competition

COMPETITORS

Market Wagon — Indianapolis local food marketplace. Direct to consumer and fragmented; the kitchen still has to source.

Sysco · US Foods — Broadline distribution. No local story, and the markup hides in the food.

Doing it yourself — Calling farms and chasing trucks. The full-time job we take away.

PRECURSORS

SOFTWARE AND AI · ASSET-LIGHT

Choco — restaurant supply software	\$1.2B val
Afresh — AI for fresh ordering	\$148M raised

DELIVERY AND LOGISTICS · CAPEX HEAVY

Misfits Market — DTC produce	~\$2B val
Imperfect Foods — produce boxes	~\$229M raised
Good Eggs — local grocery	~\$190M raised

B2B PRODUCE MARKETPLACES

ProducePay — produce trade	\$300M+ raised
Full Harvest — surplus produce	\$45M raised

Software and AI earn the valuations. Trucks and warehouses burned the cash. We are the software side.

Moat

It gets harder to beat the more it runs. The advantage compounds inside each metro.

- Two-sided density. Vet and contract a city's farms once, and a rival has to rebuild the whole local supply base to compete. More restaurants pull more capacity; more farms mean better fill.
- Proprietary data. Every contract, delivery, and price trains the agent on local supply, reliability, and demand, so our matches and forecasts beat any generic tool.
- Switching costs. Once we run a kitchen's sourcing, contracts, deliveries, and margins, replacing us means rebuilding their supply chain by hand.
- We own the supply side. The farm relationships and the allocation layer make us the demand aggregator the farming platform is built on.

The ask

A small SAFE to win the first Indianapolis customers. Almost all of it is sales.

\$50K-\$100K raise

SAFE · post-money

\$4M cap

20% discount

MFN

converts at the priced seed

- Milestone: 15 paying kitchens and about \$13K MRR in Indianapolis within 90 days, the proof point to raise a priced seed.
- The cost to expand is sales. A part-time insider and warm intros do the work.
- We run sourcing and delivery at cost for month one, so operating costs stay small early on.

USE OF FUNDS · \$75K MIDPOINT

WHERE IT GOES	AMOUNT	SHARE
