

CropConnect

Local sourcing, done for you.
We make restaurant menus
more profitable.

Restaurant supply

Agent-run

Pre-seed

Problem

Thin margins, rising expectations, and no time to source. The numbers all point the same way.

- Independent full-service restaurants net just 3 to 5 percent. Margins are razor thin.
- Food and labor already eat about 62 cents of every dollar, so little is left to cut.
- 41 percent of diners now choose a restaurant based on its local sourcing.
- Roughly 60 percent of diners weigh how healthy and traceable the ingredients are, and that share keeps climbing.
- Diners pay up to 20 percent more for a named-local dish, yet sourcing it by hand is a second full-time job most kitchens skip.

WHERE EVERY \$100 OF REVENUE GOES

The whole business runs on the last \$4.

Product

An AI agent runs local sourcing end to end. You name one ingredient. It does the other eight jobs and shows the work on a live board.

- You do two things. Ask, and serve.
- Set up in ~10 min. First item free.
- Backup farms cover shortfalls.

Opportunity

US foodservice is a \$1.1T market on track to roughly double by 2032. Full-service kitchens are our wedge.

- TAM: \$1.1T US foodservice across 1M+ outlets.
- SAM: 34,000+ full-service restaurants where local moves the check.
- SOM: the Indianapolis area first, then expand city by city.
- We bill the service layer, so revenue recurs and grows per location.

US FOODSERVICE SALES, \$ TRILLIONS

Business model

Food passes through at cost. We earn a recurring monthly service fee that scales with usage. The model on one sheet.

FEE PER ACCOUNT, MONTHLY

LINE ITEM	UNIT	MONTHLY
Base platform	1	\$149
Farms managed	2 × \$60	\$120
Items live	4 × \$30	\$120
ARPA	—	\$389
Annual run-rate	×12	\$4,668
12-month term	-20%	\$311

RECURRING REVENUE BY STAGE

METRIC	PILOT	YEAR 1	YEAR 2
Accounts	10	50	200
ARPA / mo	\$389	\$389	\$420
MRR	\$3.9K	\$19.5K	\$84K
ARR	\$47K	\$233K	\$1.0M
Food markup	\$0	\$0	\$0
Cut of sales	\$0	\$0	\$0

Competition

WHO WE GO UP AGAINST

Market Wagon

Online local farmers market, Indianapolis-born. Fragmented consumer orders, and the kitchen still has to source.

Sysco · US Foods

Broadline scale and trucks, but no local story and the markup is hidden in the food.

Doing it yourself

Calling farms and chasing trucks. The second full-time job we take away.

CropConnect

Done-for-you B2B local sourcing for restaurants. Committed volume, run by an agent.

WHO CAME BEFORE, AND WHAT WE LEARNED

Afresh

\$148M

AI for grocery fresh ordering. Proves AI works here, but it sells software, not a done-for-you service.

Good Eggs

~\$190M

Over-expanded geographies. Owning logistics nearly sank it.

Misfits Market

~\$2B val

Owens warehouses and trucks. Capex crushed the margin.

The lesson: physical distribution and leaving the region broke them. We own no trucks and stay dense in Indianapolis first.

Why now

Diner demand for local has climbed for years, and AI agents finally make true done-for-you service affordable.

- 44% of diners are more likely to visit a restaurant that prioritizes local.
- 41% say local sourcing already drives where they eat.
- \$0.68 of every local dollar stays in the community, versus \$0.43 otherwise.
- Agents cut the cost of running this service by an order of magnitude.

SHARE OF US DINERS INFLUENCED BY LOCAL SOURCING

The ask

Raising a \$50K to \$100K SAFE to onboard the first restaurants and farms in Indianapolis. Almost every dollar buys live customers.

- \$50K to \$100K SAFE, with 95 percent spent onboarding both sides of the market.
- We run sourcing and delivery at cost for the first month, so a kitchen has no reason to say no.
- Goal: 10 to 15 paying restaurants and the farms that supply them, live with proven margin lift.
- That proof, not polish, unlocks the pre-seed.

USE OF FUNDS · ~\$75K MIDPOINT

WHERE IT GOES	SHARE	AMOUNT
Onboard restaurants	45%	\$34K
Onboard farms	25%	\$19K
Delivery, first month at cost	25%	\$19K
Live customers	95%	\$72K
Tools, infra, legal	5%	\$3K
